

2020 IVEY PROJECT

Great Western has gone above and beyond to ensure good faith collaboration with local communities, regulators and elected officials on the Ivey Pad as an operator of choice in Adams County and the State of Colorado. These efforts make the Ivey project a Great Western Platinum facility.

To ensure the **safety of the community** and comply with permit requirements, Great Western installed a turn lane at no cost to the county or state.

To keep the community informed, and comply with the permit requirements, Great Western has held **quarterly townhall meetings** since **May 29, 2019 welcoming questions and conversation**. Great Western has gone to great lengths to have meaningful dialog, resources, and subject matter experts regarding all aspects of this project at these townhall meetings.

As part of Great Western's environmental, health and safety (EHS) practices, in 2019 across **112 sites** each site averaged **425 EHS inspections** that year, and the Ivey location will receive the same EHS best practices.

Great Western submitted a sundry to the Ivey Pad Form 2A with **best management practices** for this location, which include continuous air monitoring, enhanced noise and odor mitigation, enhanced dust mitigation, emergency shutdown capabilities, and leak mitigation and prevention.

The best management practices and conditions of approval **have addressed community concerns** and Great Western has **worked diligently** with the COGCC on questions related to the public comments and inquiries about this project.

The Ivey location will fall under Great Western Petroleum, LLC's stewardship value as it continues to responsibly serve the community and protect the environment by utilizing pipelines to transport products and materials. The resulting reduction in truck traffic and miles creates a **safer and more sustainable environment** by decreasing emissions and creating a cleaner community.

Great Western has complied with **distance requirements** set forth by Adams County. The closest building unit is **1,302 feet** from the edge of the disturbance area, which exceeds Adams County's setbacks requirements. The Little Lights Christian Early Learning Center is **2,813 feet** from the disturbance area, and the Silver Creek Elementary is **3,308 feet** from the disturbance area, both meeting the Adams County requirements. In addition to local regulations, Great Western is also in compliance with the current COGCC rules regarding school setbacks.

Great Western has also **limited** its truck traffic hours to accommodate the school traffic in the mornings and afternoons.

Great Western continues to be a **dedicated community partner** in Adams County. In 2019, Great Western worked with **53** nonprofit and community organizations in Adams and Weld County.

Great Western employees served more than **45,000** meals in partnership with food banks across the state; and Great Western employees spent more than 500 hours volunteering with the **53** nonprofit and community organizations. We are **committed to Colorado** and to the communities we serve.

In the wake of **COVID-19**, Great Western continues to embrace its stewardship value and has made financial **contributions** to Energy Outreach Colorado, Adams County Foundation, Freedom Service Dogs, CASA of Adams and Broomfield Counties and others. In spite of massive COVID-19 and market-related challenges for oil and natural gas, we **remain committed** to our stewardship programs.

As part of Great Western's mission to preserve the land, at the Ivey location, Great Western has **partnered with the Butterfly Pavilion** to determine the pollinators in order to plant flowers that benefit the species and pollinators as part of the reclamation process. This project, to our knowledge, is believed to be the **first of its kind** in Colorado.

Through these proactive environmental, health and safety initiatives, coupled with Great Western's core values, Great Western continues to be a leader in the natural gas and oil industry, in the Denver-Julesberg Basin and across the state of Colorado.
